

Governance Improvement Proposal Issuance (Reduced version)

Date: 24th December 2019

Referral: DAO in testing, Prudential abilities and permissions for “initclaudia”

1. ABSTRACT:

Due to the facts and the Compliance reporting RN1 of CLAUDIA’s Compliance Desk, the DAO in testing identified as “initclaudia” has entered onto a supervisory for surveillance of governance. Some measures have to be applied and tested hence the following one-page Governance Improvement Proposal resume the prudential abilities that has been applied to the governance of “initclaudia” as a DAO in testing of CLAUDIA.

2. ACTIONS:

Stewardship configuration: It was decided as a prudential configuration to establish a Stewardship for burning and revoking vesting tokens’ abilities and permissions.

Abilities and permissions: Revoking and Burning tokens from a neutral stakeholding networking. Stewardship Guidance is decided to be elaborated and decentralize the Stewardship Environmental analysis.

Issuance of tokens: Note that tokens at this DAO in testing are not the equity representation of CLAUDIA rather than one of the parameters of the governance in testing that are allocated on “initclaudia”, which is radically in distinction with the stakeholders of CLAUDIA per se.

3. PERFORMANCE:

No needs or enhancement are necessary to configure all tools and mechanisms will be in continuity upon Stewardship Guidance is published whereby performance of DAO in testing “initclaudia” shall be for experimentation from this day 24th December 2019.

Discovering and solutions from experimentation shall be published as regular commitment for CLAUDIA Network.
